

litemall gateway-api — session report

2026-07-15 · branch `fix/gateway-api` · all work merged & pushed to `master` (final tip `affa98155`)

This session delivered two bodies of work on the customer storefront (`litemall-gateway-api`), each planned, user-approved, implemented, live-verified, and merged:

- **Part 1 — Wave-4 residual close-out:** the three follow-ups recorded when Wave 4 merged (pickup contract drift, freight-quote compat fallback, stale endpoint guards).
- **Part 2 — Amazon-style storefront redesign:** Goldbox-style deal cards, a two-row Amazon-like header with an "All"-categories drawer and a single search bar, ranked local+CJ deal pages, a new Summer Deals vertical, and a category picture-tile navigation.

Part 1 — Wave-4 residual close-out `master e6ba383a9`

The Wave-4 gateway-api block (account self-service, checkout/fulfillment SPA, content SPA) was already fully merged. Three recorded residuals remained and were cleared:

1. Pickup contract reconciliation — a real bug, not just stale comments

The SPA had shipped against an *assumed* store/pickup contract before the order service committed its spec (`handoff-gateway-api-pickup.md`). Field-by-field reconciliation showed the order-detail endpoint sends only `storeId`, `verifyCode`, `verifyTime` — never the embedded `pickupStore` object (or `pickupName` / `pickupMobile`) the SPA modelled. Consequence: **the pickup store card on the order-detail page had been dead since ship** (only the verify code/QR rendered, which is why e2e passed).

- OrderDetail now fetches the store via `GET /srv/store/detail?id=` (new `orderApi.storeDetail`) and renders name, address + detailed address, hours, phone.
- Once `verifyTime` is set (order collected), a green "Collected" state replaces the code/QR block.
- Live-observed gotcha: `verifyTime` serialises as a Jackson `LocalDateTime` tuple (`[y,m,d,h,min,s]`) — formatted, not rendered raw.

2. Freight-quote legacy-body fallback removed

Checkout carried a dual-deploy fallback (retry with the legacy `{subtotal}` body) protecting against the pre-freight-template order service. That service was decommissioned with Wave 4, so the fallback was removed; the enriched `{subtotal, addressId, items}` body was verified live to return a quote with `breakdown[]`.

3. `isMissingEndpoint` retired

The last two guards (AftersalePanel, TrackingPanel) hid panels when their endpoints looked undeployed — but both endpoints are live. Aftersale list failures now degrade to an empty list; the tracking panel hides only on `errno 404` (owner-scope / foreign order, verified live). The helper itself was deleted — zero consumers remain.

Verification: tsc clean on touched files · production webpack build green · live smoke through `:8090` : store list/detail contract, enriched + legacy freight quote, pickup order 68 field shape, tracking not-shipped payload, foreign-order 404.

Part 2 — Amazon-style storefront redesign

b3b49d3fe

8d3c17b1e

merge affa98155

Reference: Amazon's Today's Deals (Goldbox) page. Constraint: keep the litemall "Teal & Coral" theme (- - 1m-* tokens) while adopting Amazon's element *positions*. Reviewed live on a worktree dev server (:9001) across two feedback rounds before merge.

Product card — Goldbox layout, litemall theme (applies everywhere)

- Discount badge moved off the image into a **deal row**: solid coral -x% badge whenever counterPrice > retailPrice , plus a coral **"Limited time deal"** label on hot goods.
- **Price before description** (Amazon order): large dark deal price with a small struck-through List: price beside it; the 2-line title/description sits below.
- Ratings, sold count, free-shipping line and the Add-to-cart CTA retained (user choice).
- The card's hardcoded off-theme colors (terracotta price, green badge, grey button) were unified onto the - - 1m-* tokens; New/Hot corner ribbons retired.
- One shared ProductCard serves home strips, deal pages, and search hits.

Header — Amazon's two rows, all text, centered on the content column

- **Main bar** (teal dark): litemall text brand · one flex-grow search bar with attached coral button and suggest-as-you-type dropdown · "Hello, {name} / Account & Lists" · "Returns & Orders" · "Cart (n)" with coral count bubble.
- **Secondary strip** (teal): "≡ All" toggle opening a slide-in category drawer (every L1 category expanding to its L2 children, plus Trending and Help shortcuts), followed by text links: Today's Deals, Summer Deals, New Arrivals, All Products, Brands, Topics, Group Buys, Customer Service.
- Both rows are centered on the same **1280px column** as the product grids (review feedback).
- **Single search bar**: the /search page's own SearchBox widget was removed; the header input is the only one. A header submit remounts InstantSearch keyed on ?q= (fresh search, filters cleared); deep links pre-fill the input.
- **BUG FIXED** The header autocomplete had been dead since it shipped: it called /srv/suggest , but the endpoint is /srv/search/suggest . Verified live — suggestions now appear.

Ranked deal pages — local + CJ on the OCS relevance boost

/hot and /new previously used /srv/goods/list?isHot|isNew — DB-flag based and local-only. Both now query the OCS-ranked /srv/search surface (8,756 goods incl. CJ):

Page	Route	Query	Ranking
Today's Deals	/hot	sort=-listed_num	best-sellers first (local + CJ)
New Arrivals	/new	sort=-created_epoch	newest first (local + CJ)

Summer Deals (new)	/summer	q=summer&source=cj	CJ summer-adapted goods, relevance-ranked (361 live hits)
-----------------------	---------	--------------------	---

Summer Deals also gets a home-page rail with "See more" and links in the strip and the All drawer.

Home page navigation

- **Category picture-tile nav** (replaces the channels row): the server-ranked category list rendered as image tiles; hovering shows just the category name as an overlay. Tile columns track the product grid's responsive breakpoints (2/3/4/5/6) live on resize, always sliced to two full rows so the tiles line up exactly with the grids below.
- **Hero left category sidebar restored** (review feedback): the static vertical menu with hover flyouts beside the banner is back — categories are now reachable from the drawer, the tiles, and the sidebar.

Verification: tsc clean on all touched files · production webpack build green · live review on the :9001 worktree dev server (proxied to the real :8090 backend) · ranked sorts, summer query, and /summer route verified against live data · user-approved across two review rounds before merge.

Commits (all pushed to origin/master)

Commit	Description
e6ba383a9	Wave-4 residual close-out — pickup contract reconciled, freight fallback + stale guards removed
b3b49d3fe	Amazon-style deal cards + two-row header with All-categories drawer
8d3c17b1e	Centered header, ranked deal pages, Summer Deals, category tile nav, hero menu restored
affa98155	Merge fix/gateway-api into master

Deploy notes

- The :9000 dev server (main checkout) picks the merge up automatically on recompile.
- The :8090 gateway's embedded SPA serves its last mvn package — rebuild litemall-gateway-api from main to serve the new bundle to real users.
- Deferred ideas (need backend fields): real deal countdown timers ("ends in 04:12:33"), "Deliver to <location>" header widget.
